## Salford Recommended Torque Values

BOLT SIZE	GRADE 2		GRADE 5		GRADE 8	
	ft-lbs	Nm	ft-lbs	Nm	ft-lbs	Nm
1/2"NC	50	68	75	102	105	142
5/8"NC	90	122	150	203	210	285
3/4"NC	160	217	270	366	375	508
7/8"NC	145	197	395	536	610	827
1"NC	210	285	590	800	910	1234

**NOTES:** These recommended torque values are applicable when applied to the nut only. These recommended torque values are approximate only. The torque-tension relationship is affected by lubrication, surface finish, thread fit, plating, lock-washers, etc.

**DO NOT** use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.

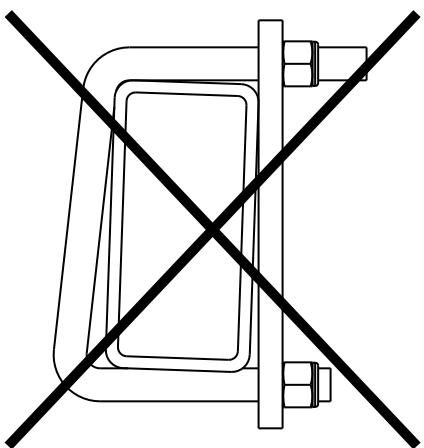

Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.

Fasteners should be replaced with the same or higher grade. If higher-grade fasteners are used, these should only be tightened to the strength of the original.

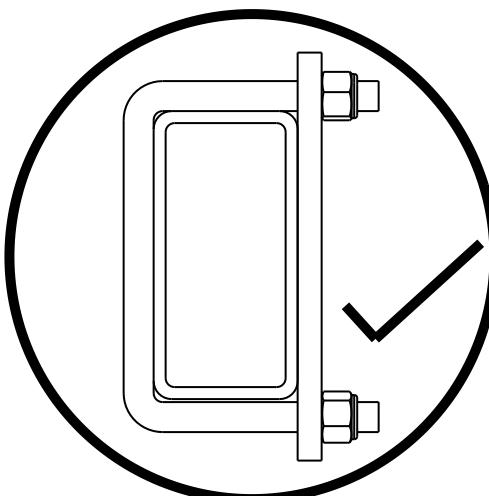

Make sure fasteners threads are clean and that you properly start thread engagement. This will prevent them from failing when tightening.

### WARNING

Do not tighten one side of the u-bolt before the other side.

Both sides of the u-bolt must be tightened equally.

## Wheel Torque Specifications

**WARNING** Maintain proper torque to provide safe and secure attachment of the wheel hub/drum. Improperly tightened wheel nuts can cause the wheel to separate from the wheel mounting surface during operation. This could result in property damage, serious personal injury, or possibly loss of life.

**NOTE** - If wheel does not have chamfers to match profile of the nuts, use flat side of nuts against rim face.

Install all lug nuts/bolts by hand to prevent cross threading and tighten lug nuts/bolts following the steps and tightening sequence diagram below.

STEP 1) Torque to 20-25 ft•lbs following the appropriate pattern below.

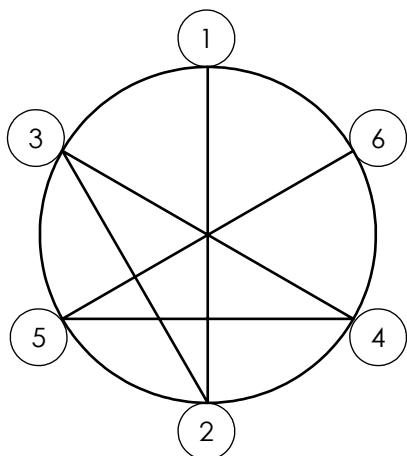

STEP 2) Torque to 55-60 ft•lbs following the appropriate pattern below.

STEP 3) Torque to final ft•lbs rating (see bolt size below) following the appropriate pattern below.

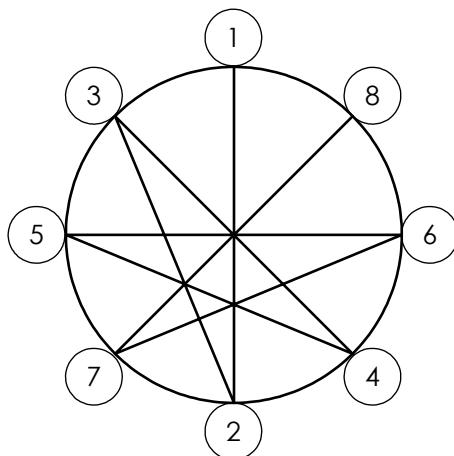

Bolt Size (Hub Size)	Final Torque
1/2" dia. bolt (up to 3000 lb hubs)	85 ft•lbs
9/16" dia. bolt (4000 - 5000 lb hubs)	120 ft•lbs
5/8" dia. bolt (5500 - 12000 lb hubs)	170 ft•lbs
3/4" dia. bolt (16000 - 20000 lb hubs)	300 ft•lbs
7/8" dia. bolt (25000 lb hubs)	450-500 ft•lbs

### Lug Nut/Bolt Tightening Sequence

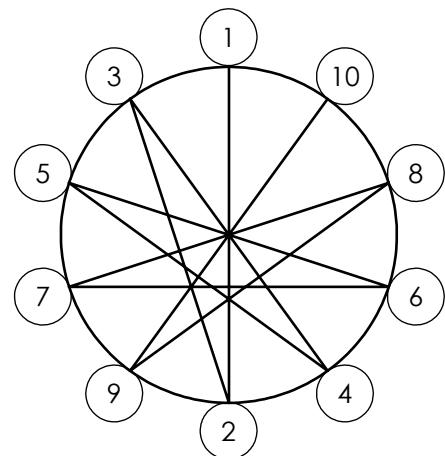

6 LUG BOLT PATTERN

8 LUG BOLT PATTERN

10 LUG BOLT PATTERN

**NOTE** - Recheck the torque settings of lug nuts/bolts after 10km (6 miles) and again after 50km (30 miles). Periodically and at the beginning of each season check the condition and the torque of the lug nuts/bolts.

## Tire Pressure Ratings

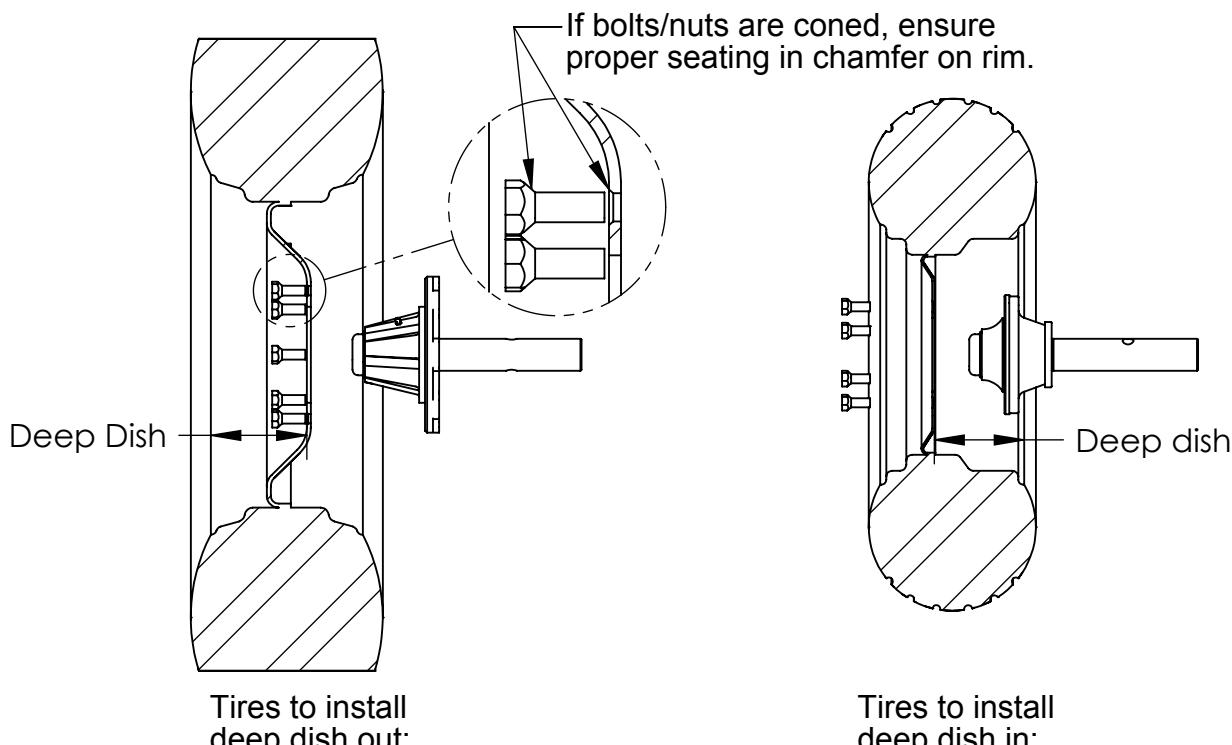

Ensure proper inflation of each tire for safe operation and extended tire life.

Pressure [psi]	Pressure [bar]	Tire Size
25 [psi]	1.72 [bar]	23.1 x 26 (16 ply)
35 [psi]	2.41 [bar]	Load Range C - 11L15
36 [psi]	2.48 [bar]	28L26 (16 ply)
52 [psi]	3.58 [bar]	30.5LR32 (181A8/B)
65 [psi]	4.48 [bar]	Load Range D - 11L15 - 12.5L15
90 [psi]		Load Range F - 11L15 - 12.5L15
90 [psi]		Truck Tires - 245/70R19-5 - 305/70R22-5 - 425/60R22-5

**NOTE** - Periodically and at the beginning of each season check the condition and the pressure of each tire.

### Tire Installation Direction

Measure both sides of tire in to rim face. Install the deep side in or out according to the instructions below.

Tires to install  
deep dish out:

12.5L  
305

Tires to install  
deep dish in:

11L  
245  
425

**Do not rely on valve stem for orientation of tires. It may face in or out on different rims.**

## General Safety Precautions

### Signal Words

The words **DANGER**, **WARNING** or **CAUTION** are used with the safety alert symbol. Learn to recognize the safety alerts, and follow the recommended precautions and safe practices.

**Three words are used in conjunction with the safety-alert symbol:**

#### **DANGER**

Indicates an imminently hazardous situation that, if not avoided, will cause **DEATH OR VERY SERIOUS INJURY**.

#### **WARNING**

Indicates a potentially hazardous situation that, if not avoided, could cause **DEATH OR SERIOUS INJURY**.

#### **CAUTION**

Indicates a potentially hazardous situation that, if not avoided, may result in **MINOR or MODERATE INJURY**.

Replace any **DANGER**, **WARNING**, **CAUTION** or instructional decal that is not readable or is missing. The location and part number of these decals is identified later in this section of the manual.

The words **Important** and **Note** are not related to personal safety but are used to give additional information and tips for operating or servicing this equipment.

**IMPORTANT:** Identifies special instructions or procedures which, if not strictly observed could result in damage to, or destruction of the machine, process or its surroundings.

**NOTE:** Indicates points of particular interest for more efficient and convenient repair or operation.

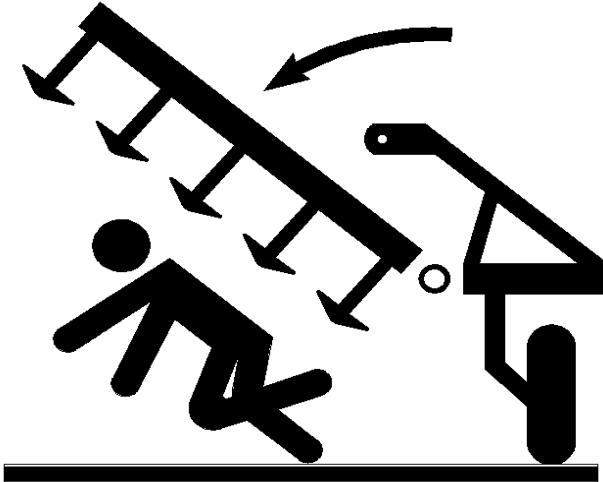

**A CAREFUL OPERATOR IS THE BEST INSURANCE AGAINST AN ACCIDENT !**

## General Safety Precautions

### DANGER

- Wings may fall rapidly causing injury.
- Always stay clear of wings when being lowered, raised or in a elevated state.
- Always use lockup device provided when raised.
- Ensure cylinder is completely filled with hydraulic fluid to avoid unexpected movement.

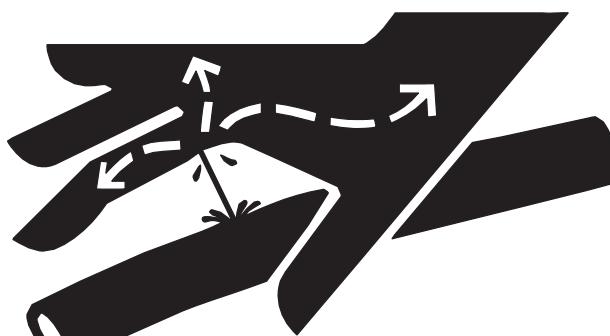

### **Hydraulics**

### DANGER

- **DO NOT** search for high pressure hydraulic leaks without hand and face protection. A tiny, almost invisible leak can penetrate skin, thereby requiring immediate medical attention.
- Use cardboard or wood to detect leaks – never your hands.
- Double check that all is clear before operating hydraulics.
- **Never** remove hydraulic hoses or ends with machine elevated. Relieve hydraulic pressure before disconnecting hydraulic hoses or ends.
- Maintain proper hydraulic fluid levels.
- Keep all connectors clean for positive connections.
- Ensure all fittings and hoses are in good condition.
- Do not stand under wings.

2	1	A80001	POPPET VALVE MOUNTING BRACKET
3	1	HPMSC10	STROKE CONTROL VALVE
4	1	C1008	DETENT ADJUSTABLE STOP
5	1	C1009	9700 DEPTH CONTROL ROD - 144"
6	1	BU1046	U-BOLT 5/8" x 4" x 7 1/2" LG.
7	1	BU1061	U-BOLT 5/8" x 6" x 5 1/2"
8	4	BN10L	5/8" NYLOCK NUT NC
9	2	B0525	5/16 x 2 1/2" BOLT
10	2	BN05L	5/16" LOCK NUT
11	1	B0820	1/2"NC x 2" LG. HEX BOLT
12	1	BN08L	1/2" NYLOCK NUT NC
13	1	BSC0415	1/4" x 1 1/2" COTTER PIN

1. Install depth control bracket (1) to top of LH axle with 5/8" x 4" x 7 1/2" U-bolt (6) and 5/8" locknuts (8). Position arm approximately 10" (25cm) from top of axle.
2. Attach depth control rod (5) to bracket with 1/2" x 2" hex bolt (11) and 1/2" locknut (12). Do not overtighten, rod clevis must be able to pivot on arm. Rod may need bending to clear shanks and frame.
3. Slide poppet valve mounting bracket (2) over control rod and attach to frame with 5/8" x 6" x 5 1/2" U-bolt (7) and 5/8" locknuts (8). Tighten both locknuts equally. DO NOT OVERTIGHTEN!
4. Install poppet valve (3) to mounting bracket with 5/16" x 2 1/2" hex bolts (9) and 5/16" locknuts (10). Note: boss on valve housing must face bracket, and poppet pin must face to front of machine (see picture below).
5. Slide adjustable stop (4) onto depth control rod and fasten in place with attached hex bolt.
6. Place 1/4" x 1 1/2" cotter pin (13) into end of depth control rod.

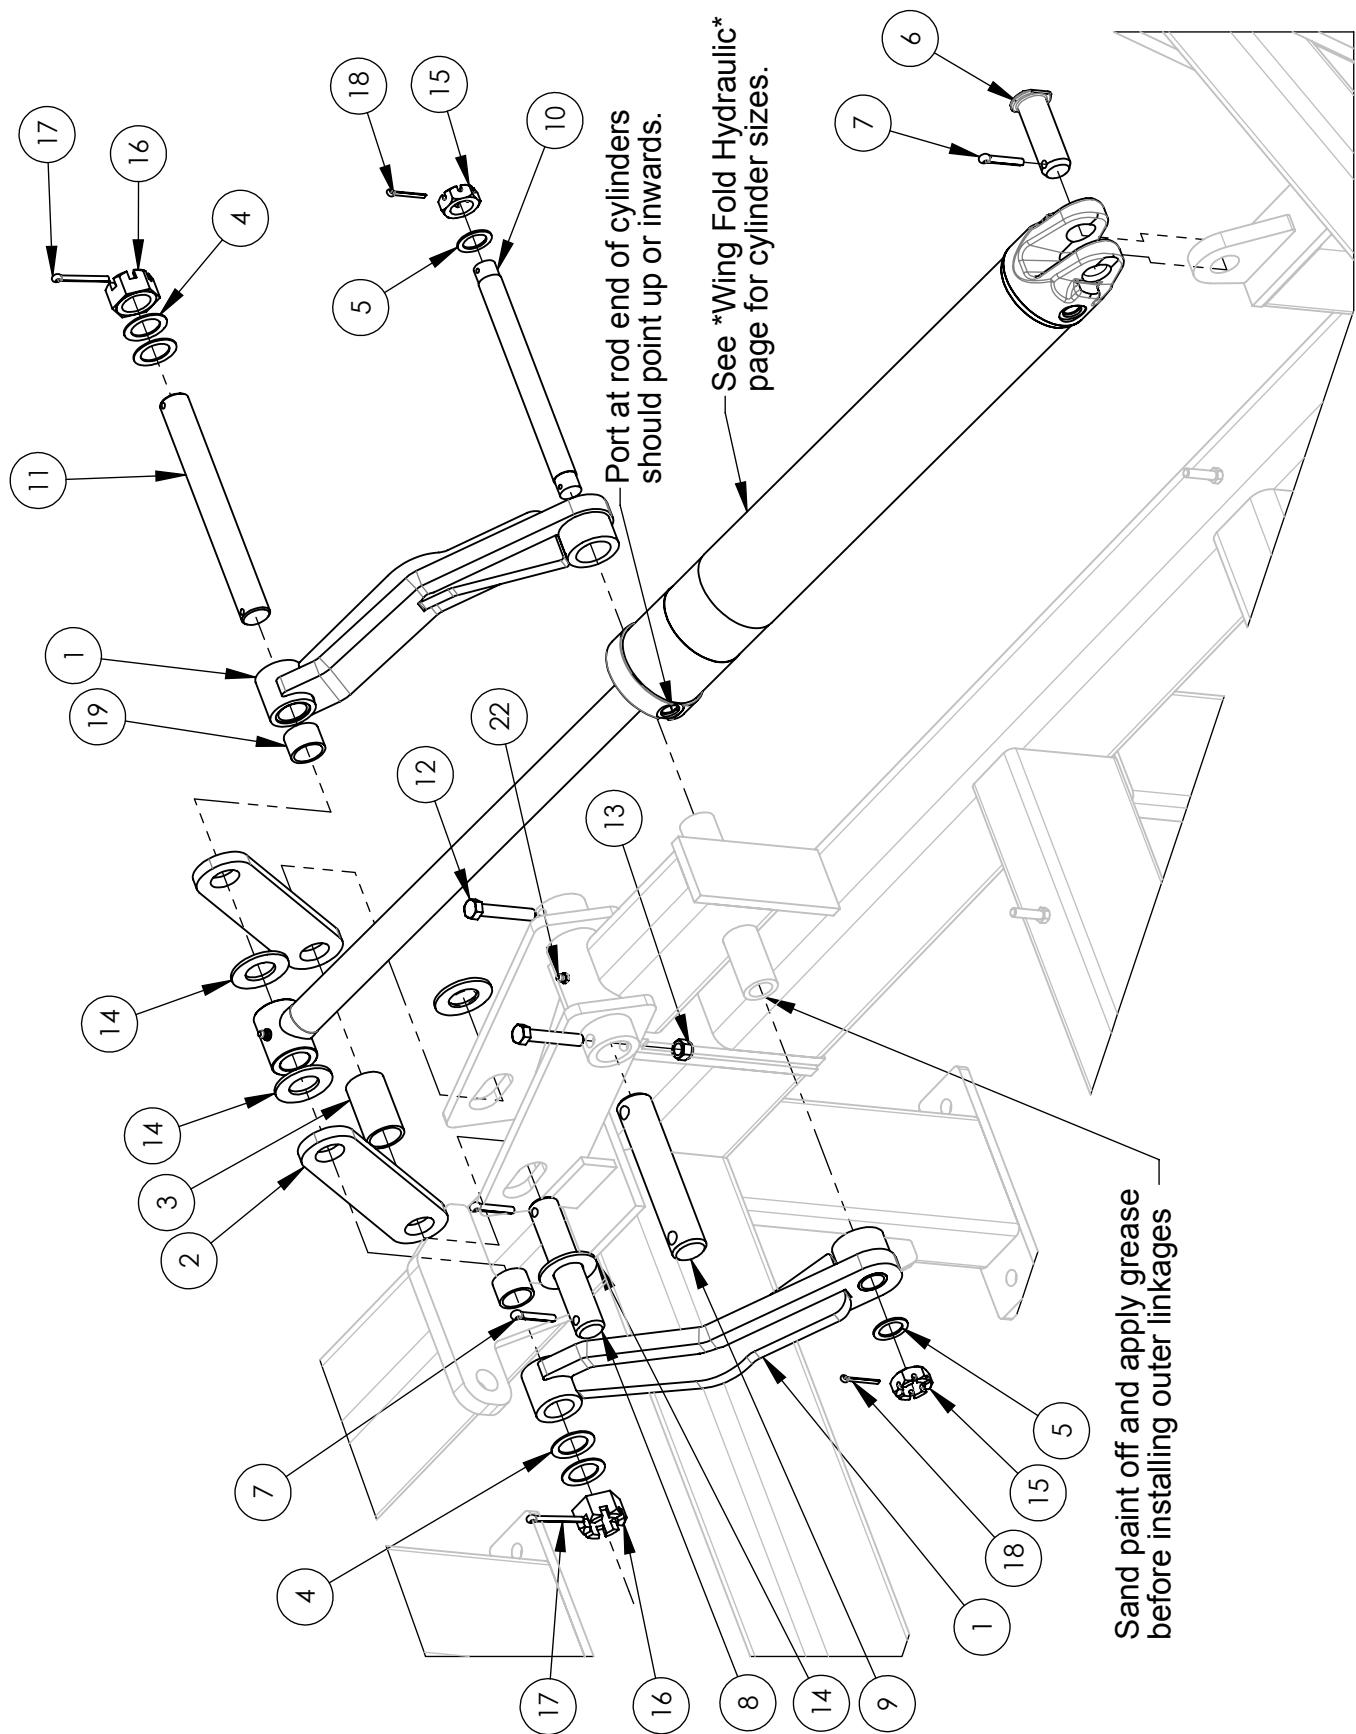

### CAUTION

After assembly is complete move machine all the way up and down and watch for any interference throughout the cycle.

1. Install 30" extensions (1) following centreline spacing on harrow layouts. Mount extension so that holes closer to the edge are pointing upwards. Retain extension with 3/4" x 6" x 6 1/2" U-bolts (3) and 3/4" locknuts (4).
2. Attach harrow arm assemblies (2) to extensions. Centre hole of harrow head lines up with bottom hole of extension. Retain harrow heads with 5/8" x 2" hex bolts (5) and 5/8" locknuts (9) at all locations except for light mounting brackets.
3. On harrow arm just left of centre, insert SMV sign mounting bracket (10) between plate and nuts. Attach SMV sign (11) to bracket with 3/8" x 1" hex bolts (13) and 3/8" locknuts (12). Mount harrow tool holder (15) between plate and nut on far left hand head of 9705 - 9715 rigid machines, or on leftmost head on main frame on 9713 & 9715 folding machines. Harrow tool (14) sits in holder.
6. Mount tine harrow assemblies to arm assemblies with 1/2" x 2 1/2" x 3 1/2" U-bolts (6) and 1/2" locknuts (7). See harrow layouts for tine assembly part numbers and locations.
7. Mount rollers to arm assemblies with 5/8" x 2" x 3 1/2" U-bolts (8) and 5/8" locknuts (9). See harrow layouts for roller assembly part numbers and locations. Leave 1-2" (3-5cm) between fixed rollers, and 3-4" (8-10cm) between rollers on wings and roller on mainframe.

### CHARGING THE CIRCUIT

Mount only the Barrel end of the cylinders until the circuit has been charged.

Connect only the hoses to the tractor until the circuit is charged. Be sure parking stand is properly engaged before beginning.

1. Be sure that all cylinders can extend completely without striking anything
2. Connect hoses to tractor.
3. Extend cylinders slowly and hold lever for 2-3 minutes. This will purge air from the circuit (each lift cylinder has an internal valve, which allows oil to by-pass only when completely extended)
4. The circuit is now free from air. Install rod end pins.

### CHARGING THE CIRCUIT

When first using machine, or anytime that air could have entered into the system, it is necessary to remove the air from the system.

1. Connect Tractor.
  2. Open Ball Valve.
  3. Extend cylinder completely and hold lever for 30 seconds as air exits cylinder.
  4. Close cylinder completely and hold lever for 30 seconds.
  5. Repeat steps 3 and 4 three times.
- The system is now free from air.

When machine is not in use, close ball valve.

The **Cross-Over Relief Valve** is Preset for average working conditions.

The Valve will allow oil to bypass if the Disc Gang cylinders see excessive force. This could be from passing over a large rock, a sharp hill, etc.

Should the oil bypass, the cylinders will retract until the pressure spike is relieved. The operator will need to lower the disc back into position from the tractor.

## Cross Over Relief Valve Settings

CHECK THAT BOTH SIDES OF RELIEF VALVE HAVE BEEN PROPERLY SET

### IMPORTANT

RELIEF VALVE MUST BE SET FOR HYDRAULIC SYSTEM TO MAINTAIN PROPER PRESSURE

REMOVE CAP

TIGHTEN ADJUSTMENT SCREW ALL THE WAY, THEN TURN OUT SCREW 2 FULL TURNS

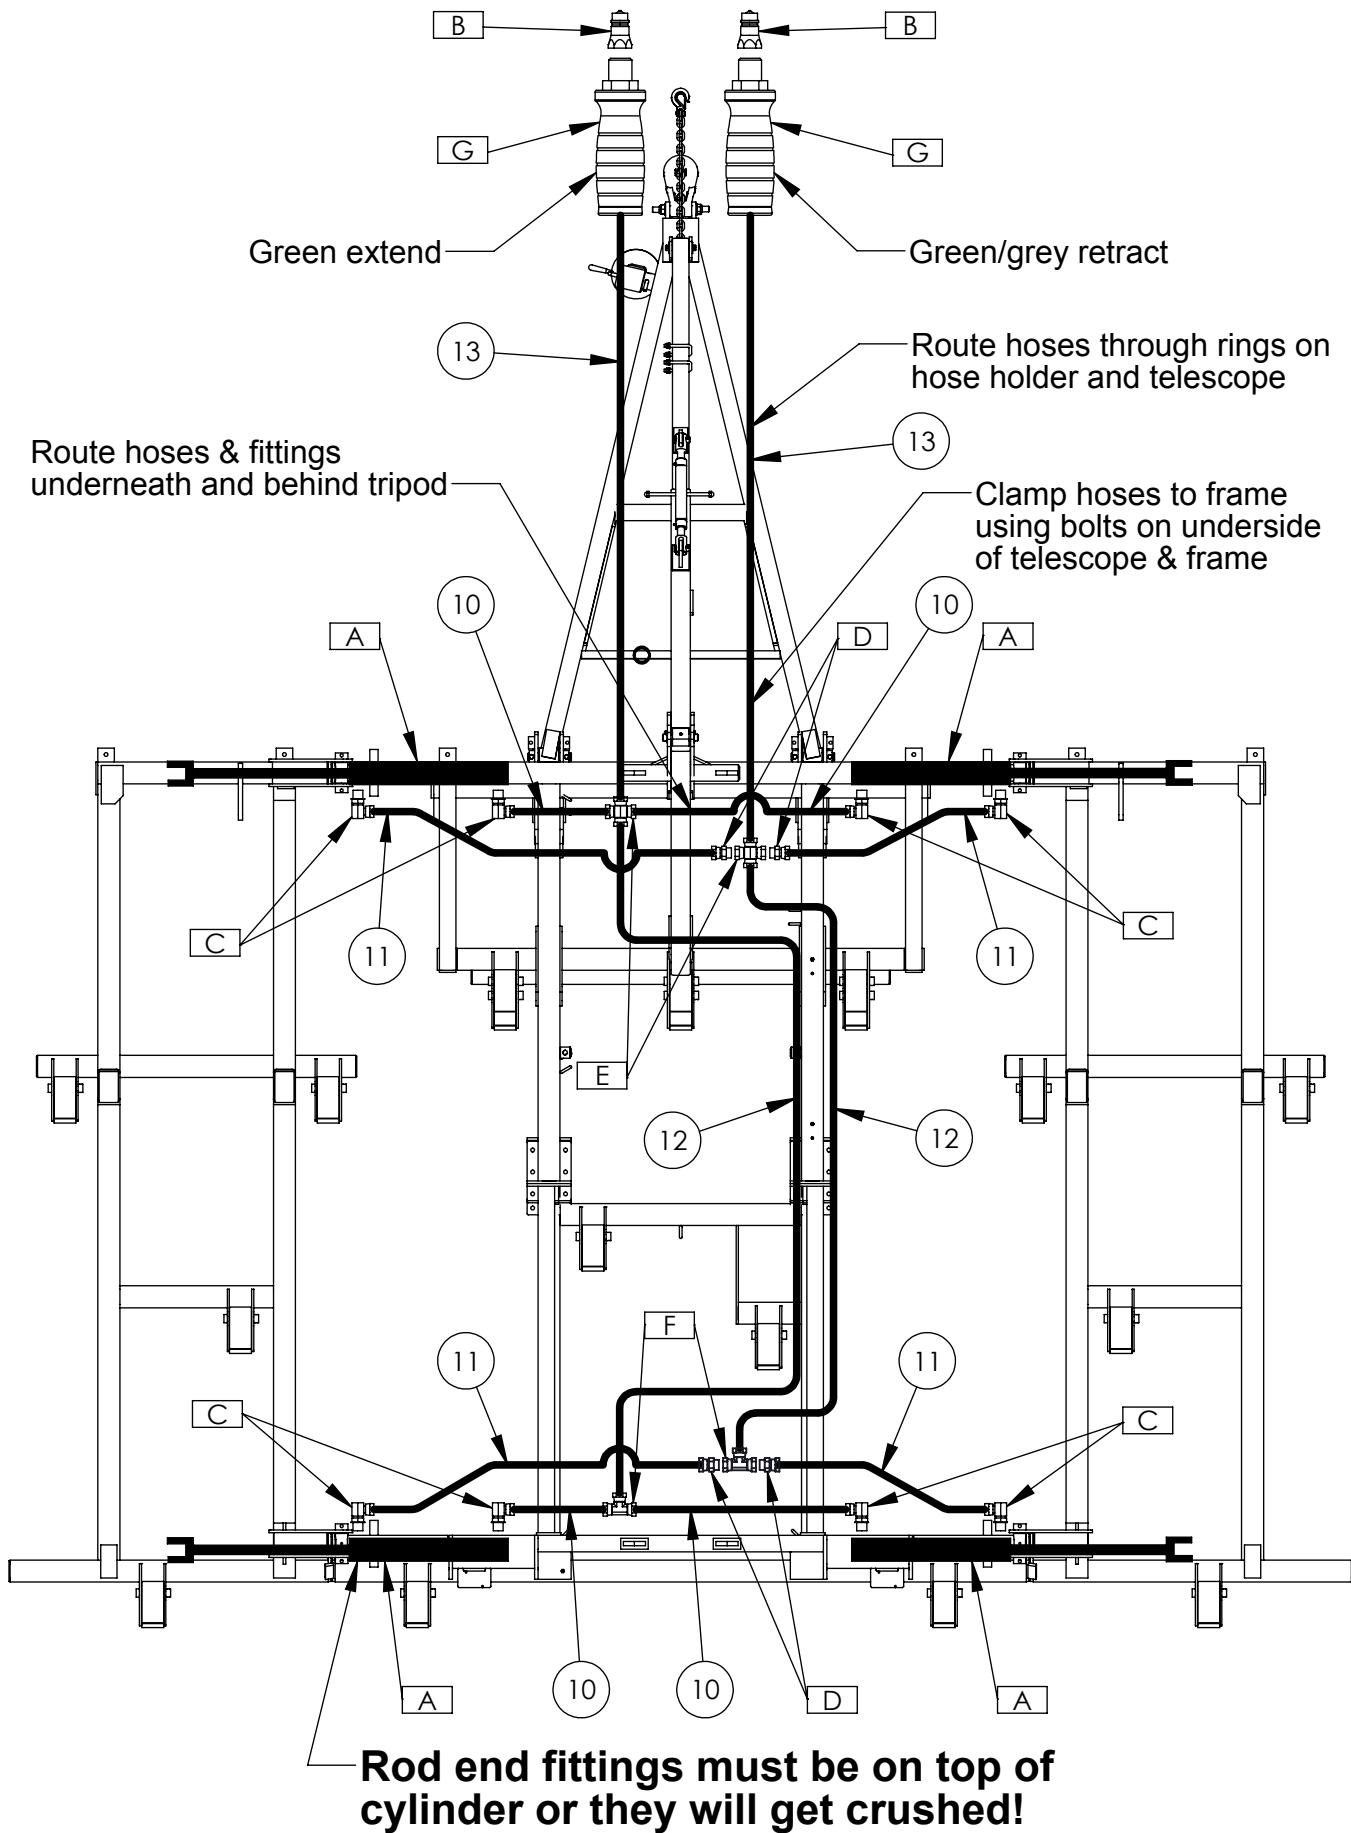

REPLACE CAP

### CHARGING WING FOLD CYLINDERS

- IMPORTANT: Do not connect the cylinder rods until system has been charged with oil.**
1. Prop up the cylinder with a block of wood so the rod can extend without striking anything.
  2. Hitch to tractor and connect hoses. (note: check to see that all the cylinders move in the same direction. If not, then switch the rod and barrel hoses of the cylinder(s) moving backward.)
  3. Extend cylinders completely. Hold lever for 30 seconds as air exits the cylinder.
  4. Retract cylinders completely. Hold lever for 30 seconds.
  5. Repeat three times.
  6. Install cylinder pins.

7. When folding for the first time, or when new hardware is installed, check that cylinders and fittings do not collide with the wing frame when fully folded. If so, use an alternate plug in the cylinder, or simply rotate cylinder 180 degrees.

### **CAUTION**

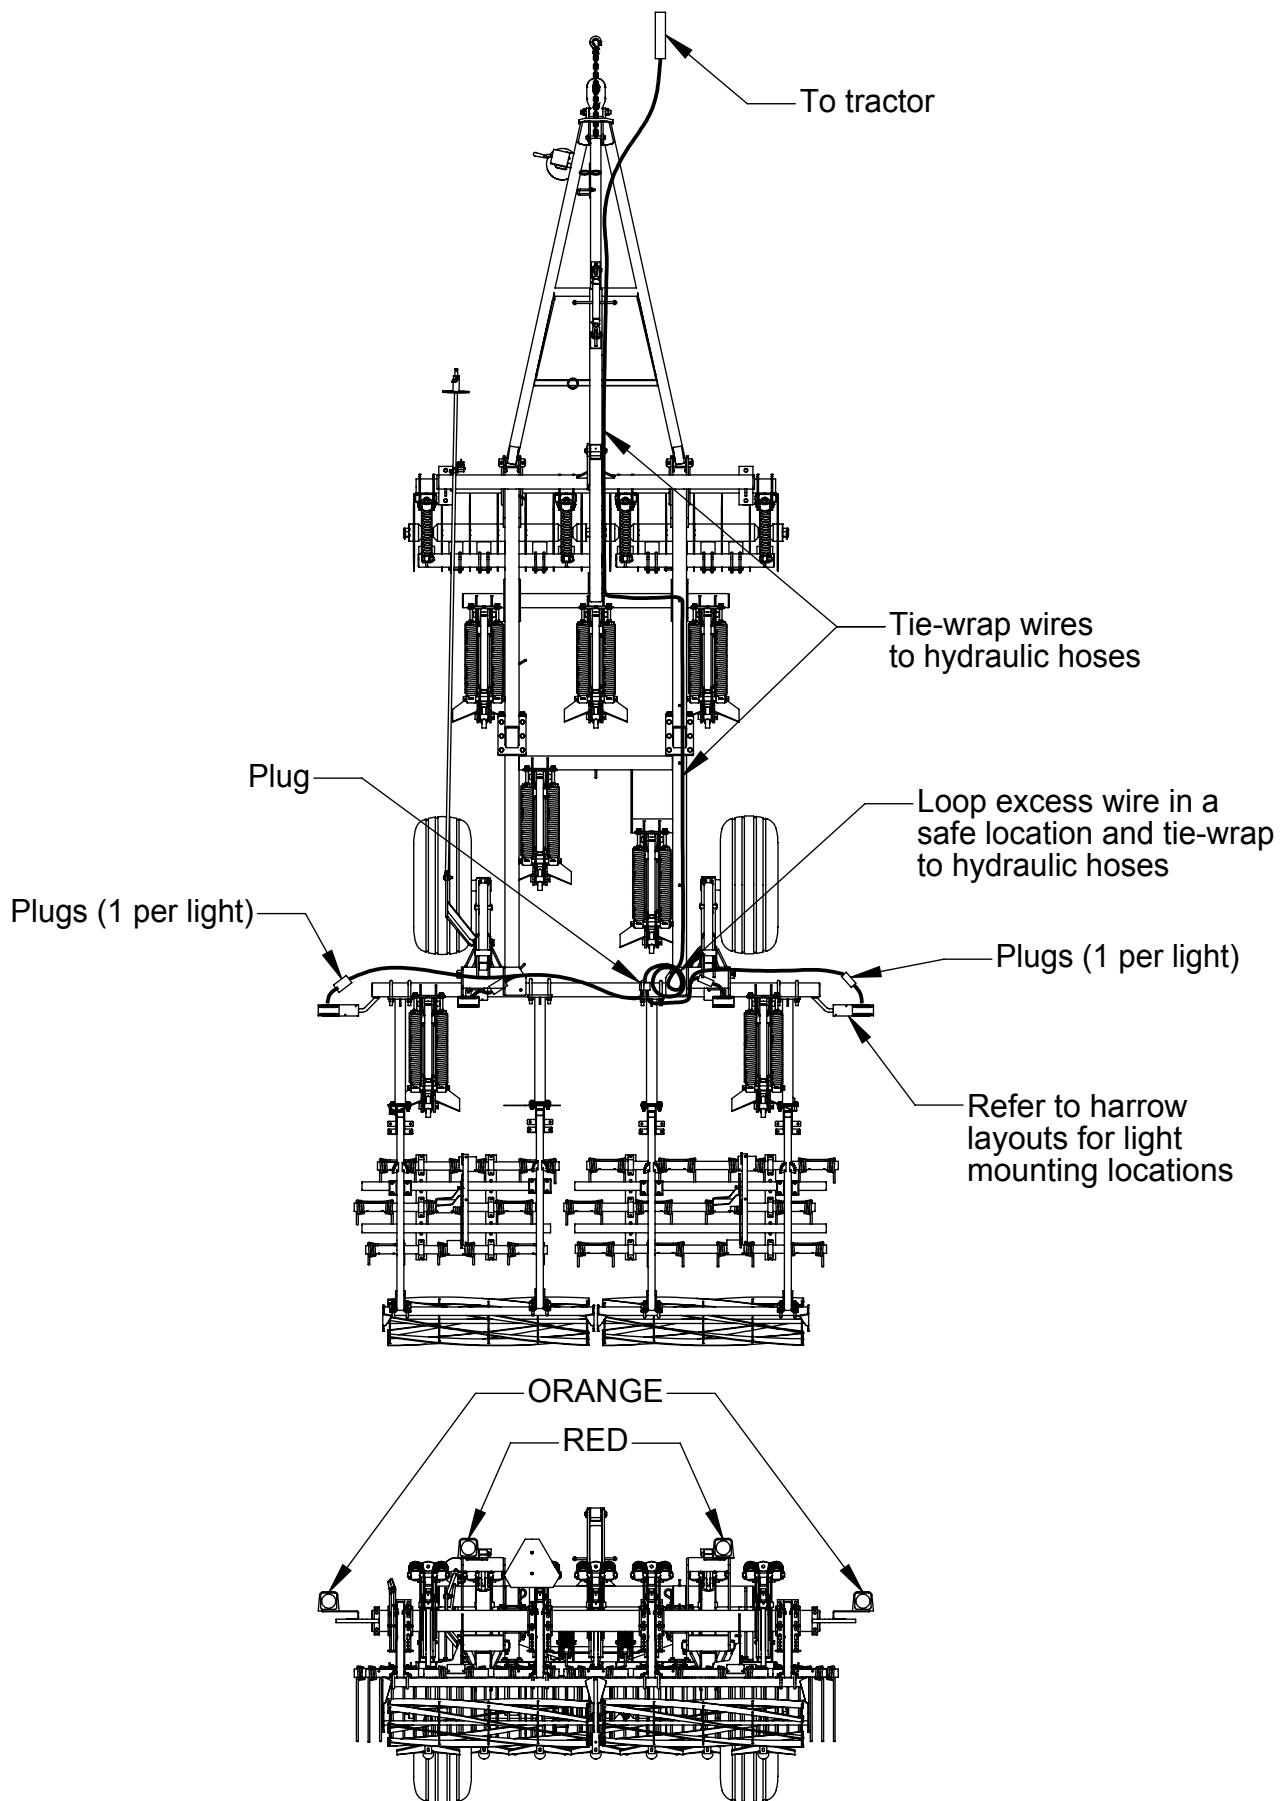

**Air in the wing cylinders will cause wings to fall to the ground!!!**  
Whenever air could have entered the cylinders, repeat the process above to purge circuit.

**Never work on a lift system with the wings folded!!!** ALWAYS UNFOLD WINGS before working on hydraulics!!

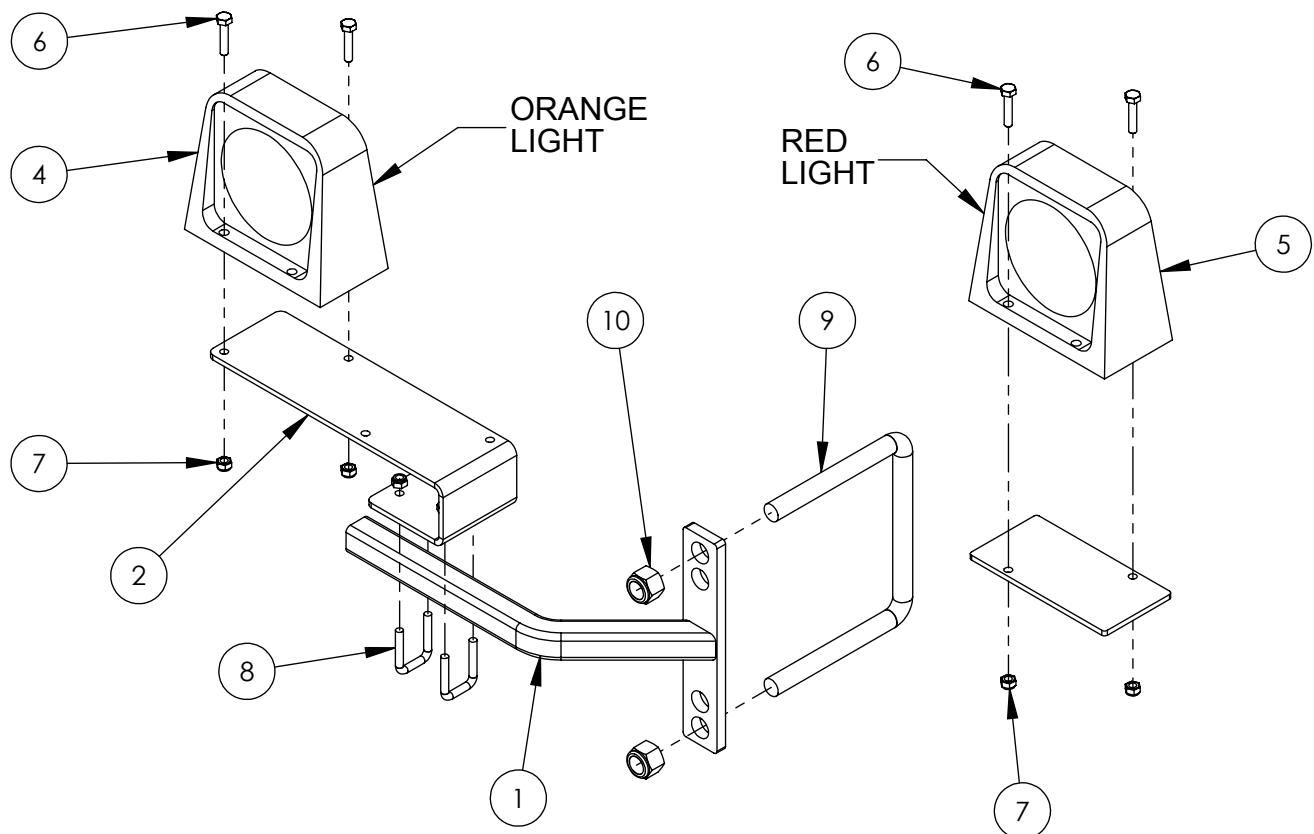

### **DANGER**
