## Salford Recommended Torque Values

BOLT SIZE	GRADE 2		GRADE 5		GRADE 8	
	ft-lbs	Nm	ft-lbs	Nm	ft-lbs	Nm
1/2"NC	50	68	75	102	105	142
5/8"NC	90	122	150	203	210	285
3/4"NC	160	217	270	366	375	508
7/8"NC	145	197	395	536	610	827
1"NC	210	285	590	800	910	1234

**NOTES:** These recommended torque values are applicable when applied to the nut only. These recommended torque values are approximate only. The torque-tension relationship is affected by lubrication, surface finish, thread fit, plating, lock-washers, etc.

**DO NOT** use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.

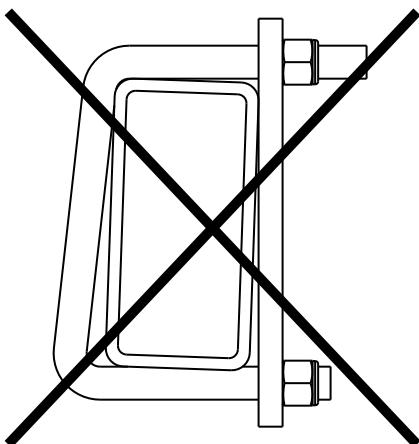

Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.

Fasteners should be replaced with the same or higher grade. If higher-grade fasteners are used, these should only be tightened to the strength of the original.

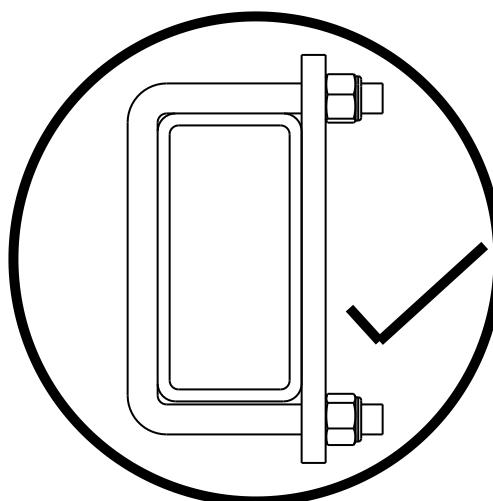

Make sure fasteners threads are clean and that you properly start thread engagement. This will prevent them from failing when tightening.

### WARNING

Do not tighten one side of the u-bolt before the other side.

Both sides of the u-bolt must be tightened equally.

## Torque Values for Tires

**WARNING** Maintain proper torque to provide safe and secure attachment of the wheel hub/drum. Improperly tightened wheel nuts can cause the wheel to separate from the wheel mounting surface during operation. This could result in property damage, serious personal injury, or possibly loss of life.

**NOTE** - If wheel does not have chamfers to match profile of the nuts, use flat side of nuts against rim face.

Install all lug nuts/bolts by hand to prevent cross threading and tighten lug nuts/bolts following the steps and tightening sequence diagram below.

STEP 1) Torque to 20-25 ft•lbs following the appropriate pattern below.

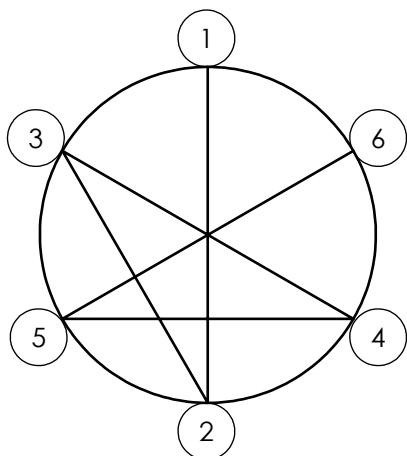

STEP 2) Torque to 55-60 ft•lbs following the appropriate pattern below.

STEP 3) Torque to final ft•lbs rating (see bolt size below) following the appropriate pattern below.

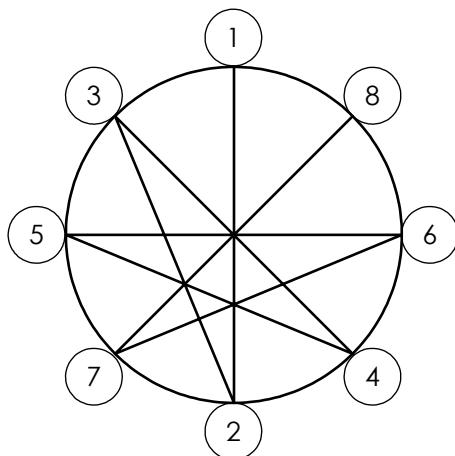

Bolt Size (Hub Size)	Final Torque
1/2" dia. bolt (up to 3000 lb hubs)	85 ft•lbs
9/16" dia. bolt (4000 - 5000 lb hubs)	120 ft•lbs
5/8" dia. bolt (5500 - 12000 lb hubs)	170 ft•lbs
3/4" dia. bolt (16000 - 20000 lb hubs)	300 ft•lbs
7/8" dia. bolt (25000 lb hubs)	450-500 ft•lbs

### Lug Nut/Bolt Tightening Sequence

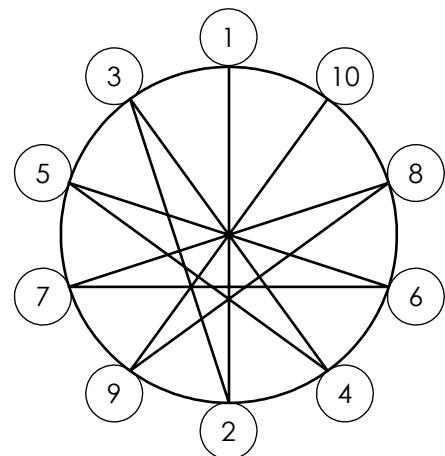

6 LUG BOLT PATTERN

8 LUG BOLT PATTERN

10 LUG BOLT PATTERN

**NOTE** - Recheck the torque settings of lug nuts/bolts after 10km (6 miles) and again after 50km (30 miles). Periodically and at the beginning of each season check the condition and the torque of the lug nuts/bolts.

## Pressure Values for Tires

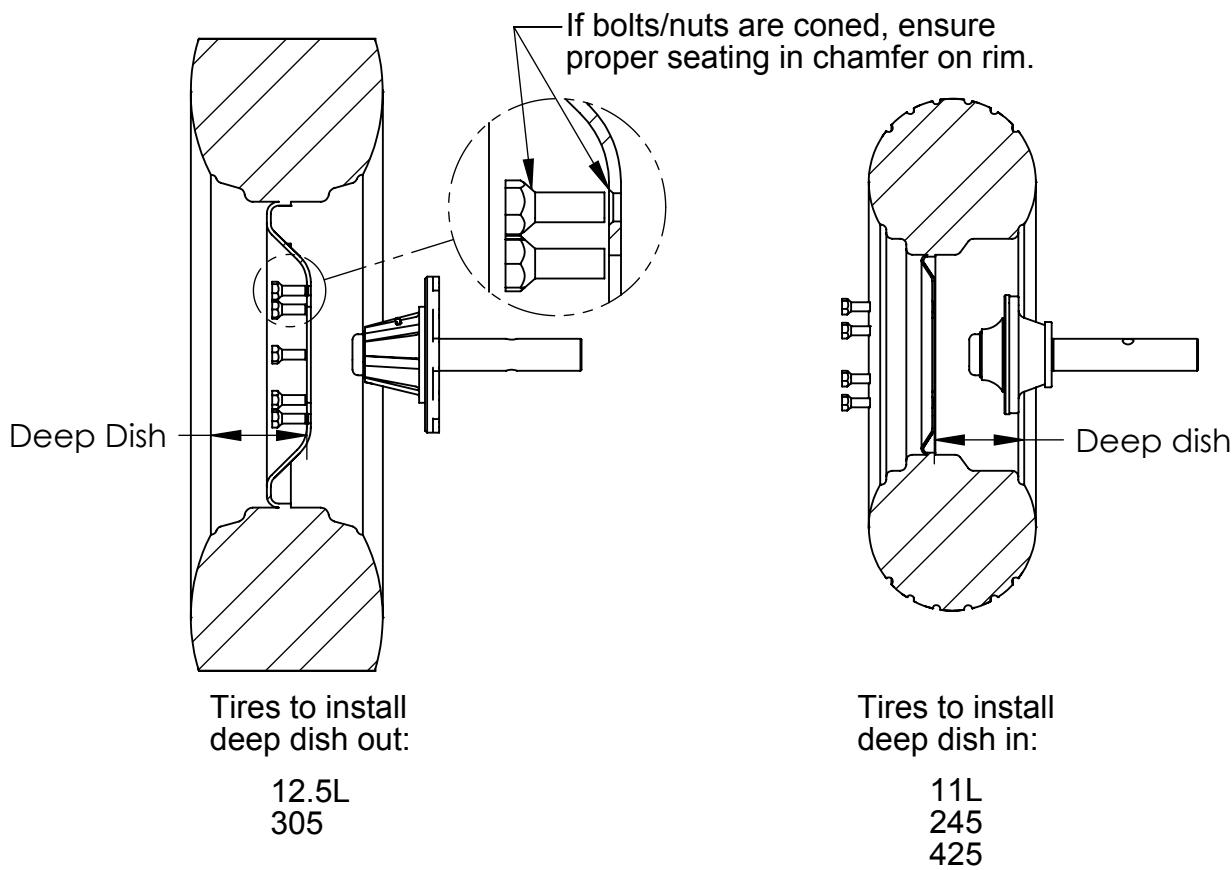

Ensure proper inflation of each tire for safe operation and extended tire life.

Pressure [psi]	Pressure [bar]	Tire Size
25 [psi]	1.72 [bar]	23.1 x 26 (16 ply)
35 [psi]	2.41 [bar]	Load Range C - 11L15
36 [psi]	2.48 [bar]	28L26 (16 ply)
52 [psi]	3.58 [bar]	30.5LR32 (181A8/B)
65 [psi]	4.48 [bar]	Load Range D - 11L15 - 12.5L15
		Load Range F - 11L15 - 12.5L15
90 [psi]	6.20 [bar]	Truck Tires - 245/70R19-5 - 305/70R22-5 - 425/60R22-5

**NOTE** - Periodically and at the beginning of each season check the condition and the pressure of each tire.

### Tire Installation Direction

Measure both sides of tire in to rim face. Install the deep side in or out according to the instructions below.

**Do not rely on valve stem for orientation of tires. It may face in or out on different rims.**

## General Safety Precautions

### Signal Words

The words **DANGER**, **WARNING** or **CAUTION** are used with the safety alert symbol. Learn to recognize the safety alerts, and follow the recommended precautions and safe practices.

**Three words are used in conjunction with the safety-alert symbol:**

#### **DANGER**

Indicates an imminently hazardous situation that, if not avoided, will cause **DEATH OR VERY SERIOUS INJURY**.

#### **WARNING**

Indicates a potentially hazardous situation that, if not avoided, could cause **DEATH OR SERIOUS INJURY**.

#### **CAUTION**

Indicates a potentially hazardous situation that, if not avoided, may result in **MINOR or MODERATE INJURY**.

Replace any **DANGER**, **WARNING**, **CAUTION** or instructional decal that is not readable or is missing. The location and part number of these decals is identified later in this section of the manual.

The words **Important** and **Note** are not related to personal safety but are used to give additional information and tips for operating or servicing this equipment.

**IMPORTANT:** Identifies special instructions or procedures which, if not strictly observed could result in damage to, or destruction of the machine, process or its surroundings.

**NOTE:** Indicates points of particular interest for more efficient and convenient repair or operation.

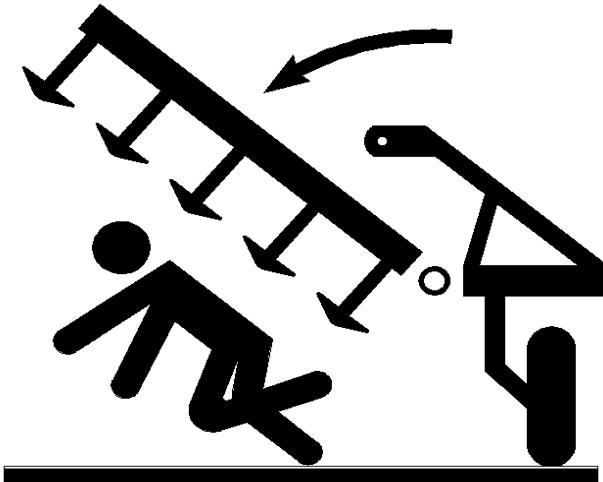

**A CAREFUL OPERATOR IS THE BEST INSURANCE AGAINST AN ACCIDENT !**

## General Safety Precautions

### DANGER

- Wings may fall rapidly causing injury.
- Always stay clear of wings when being lowered, raised or in a elevated state.
- Always use lockup device provided when raised.
- Ensure cylinder is completely filled with hydraulic fluid to avoid unexpected movement.

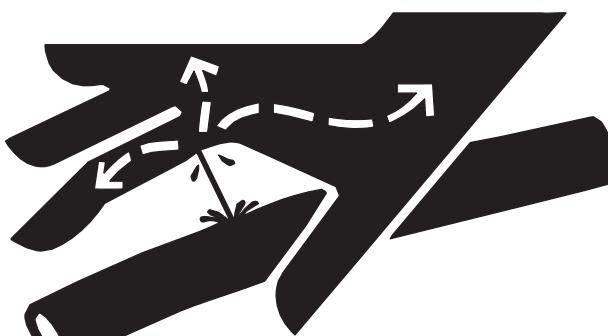

### **Hydraulics**

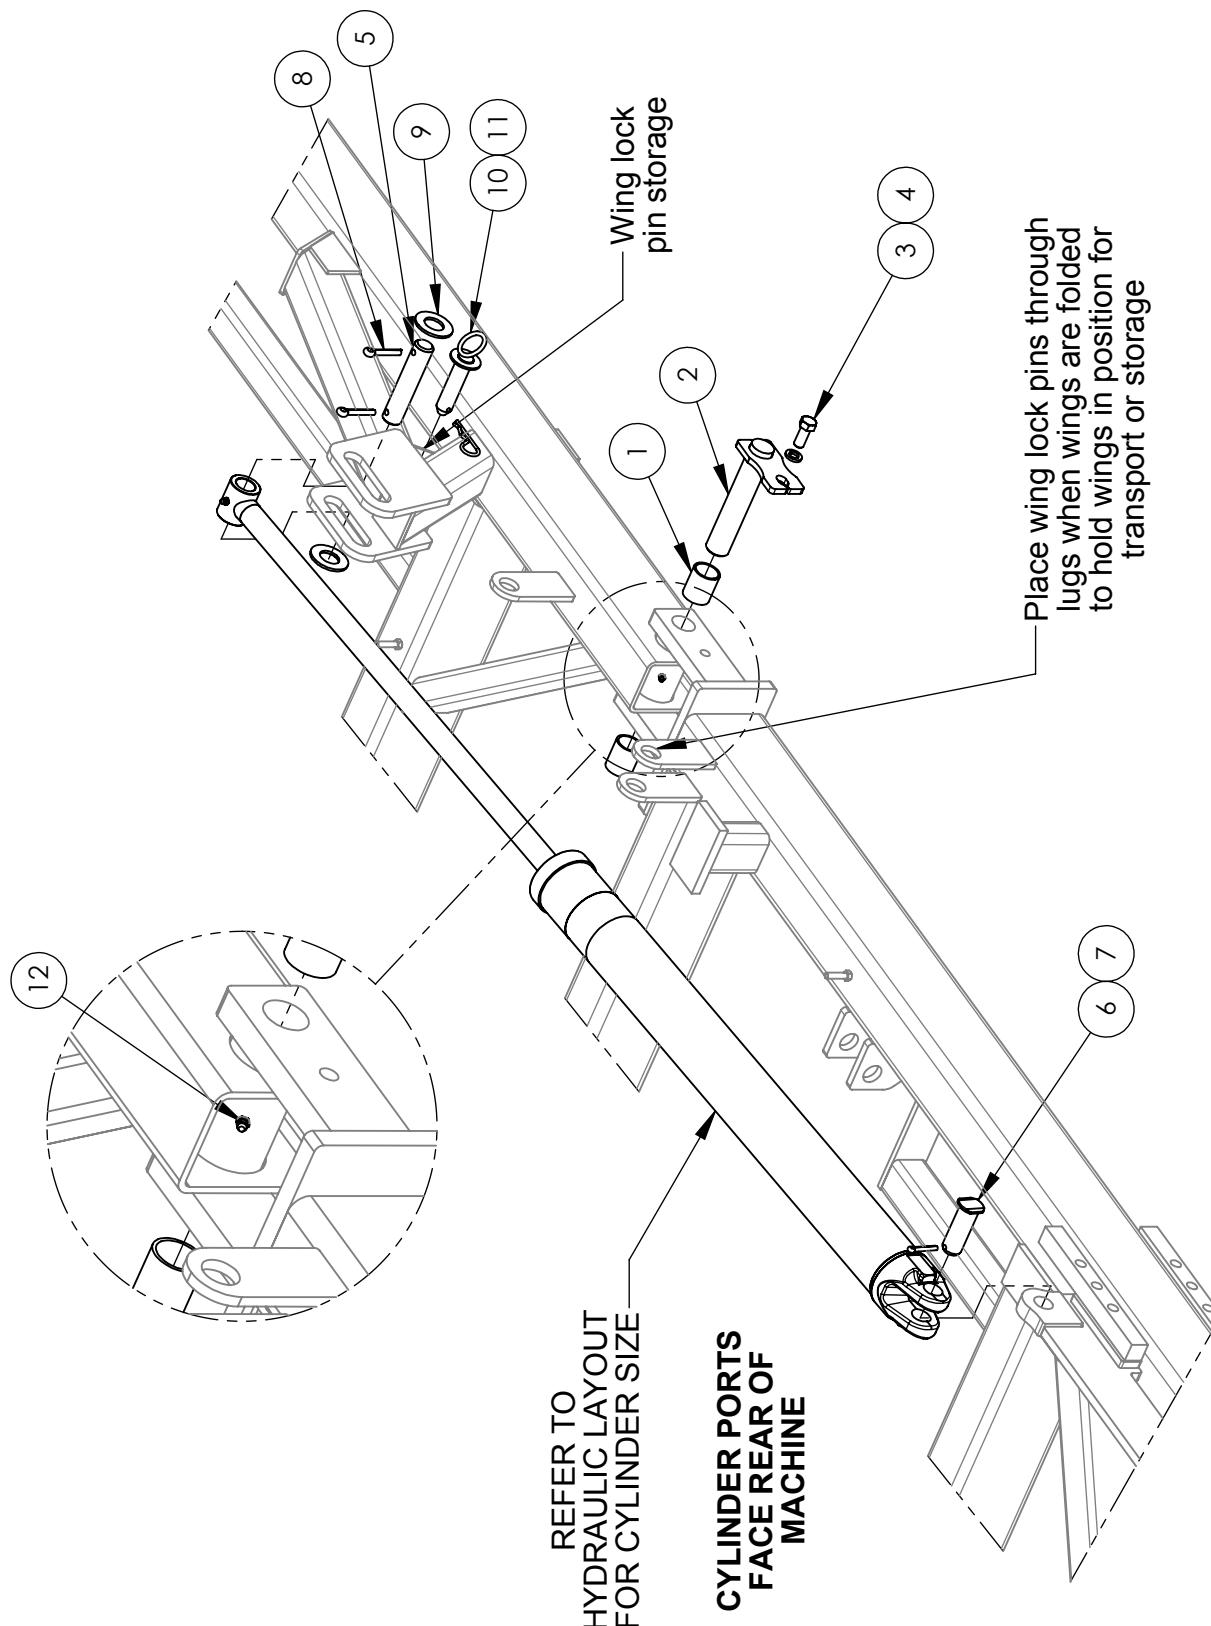

### DANGER

- **DO NOT** search for high pressure hydraulic leaks without hand and face protection. A tiny, almost invisible leak can penetrate skin, thereby requiring immediate medical attention.
- Use cardboard or wood to detect leaks □ never your hands.
- Double check that all is clear before operating hydraulics.
- **Never** remove hydraulic hoses or ends with machine elevated. Relieve hydraulic pressure before disconnecting hydraulic hoses or ends.
- Maintain proper hydraulic fluid levels.
- Keep all connectors clean for positive connections.
- Ensure all fittings and hoses are in good condition.
- Do not stand under wings.

### CHARGING THE CIRCUIT

On a concrete pad or hard ground, do not retract cylinders all the way while tongue is hitched to tractor, this could result in bending the tractor drawbar upwards.

\*\*Connect only the pins on the barrel ends of the cylinders until the circuit has been charged.\*\*

1. Prop cylinders with blocks of wood, be sure that all cylinders can extend completely without striking anything.
  2. Connect hoses to tractor.
  3. Extend cylinders and hold lever for 2-3 minutes. This will purge the air from the circuit. (The lift cylinders have a port that allows oil to pass when completely extended.)
  4. The circuit is now free from air. Install Rod end Pins. Connect tongue telescope.
- Whenever air could have entered the cylinders, repeat above steps to purge circuit.
  - Test wing fold and adjust hose droop at wings if necessary.

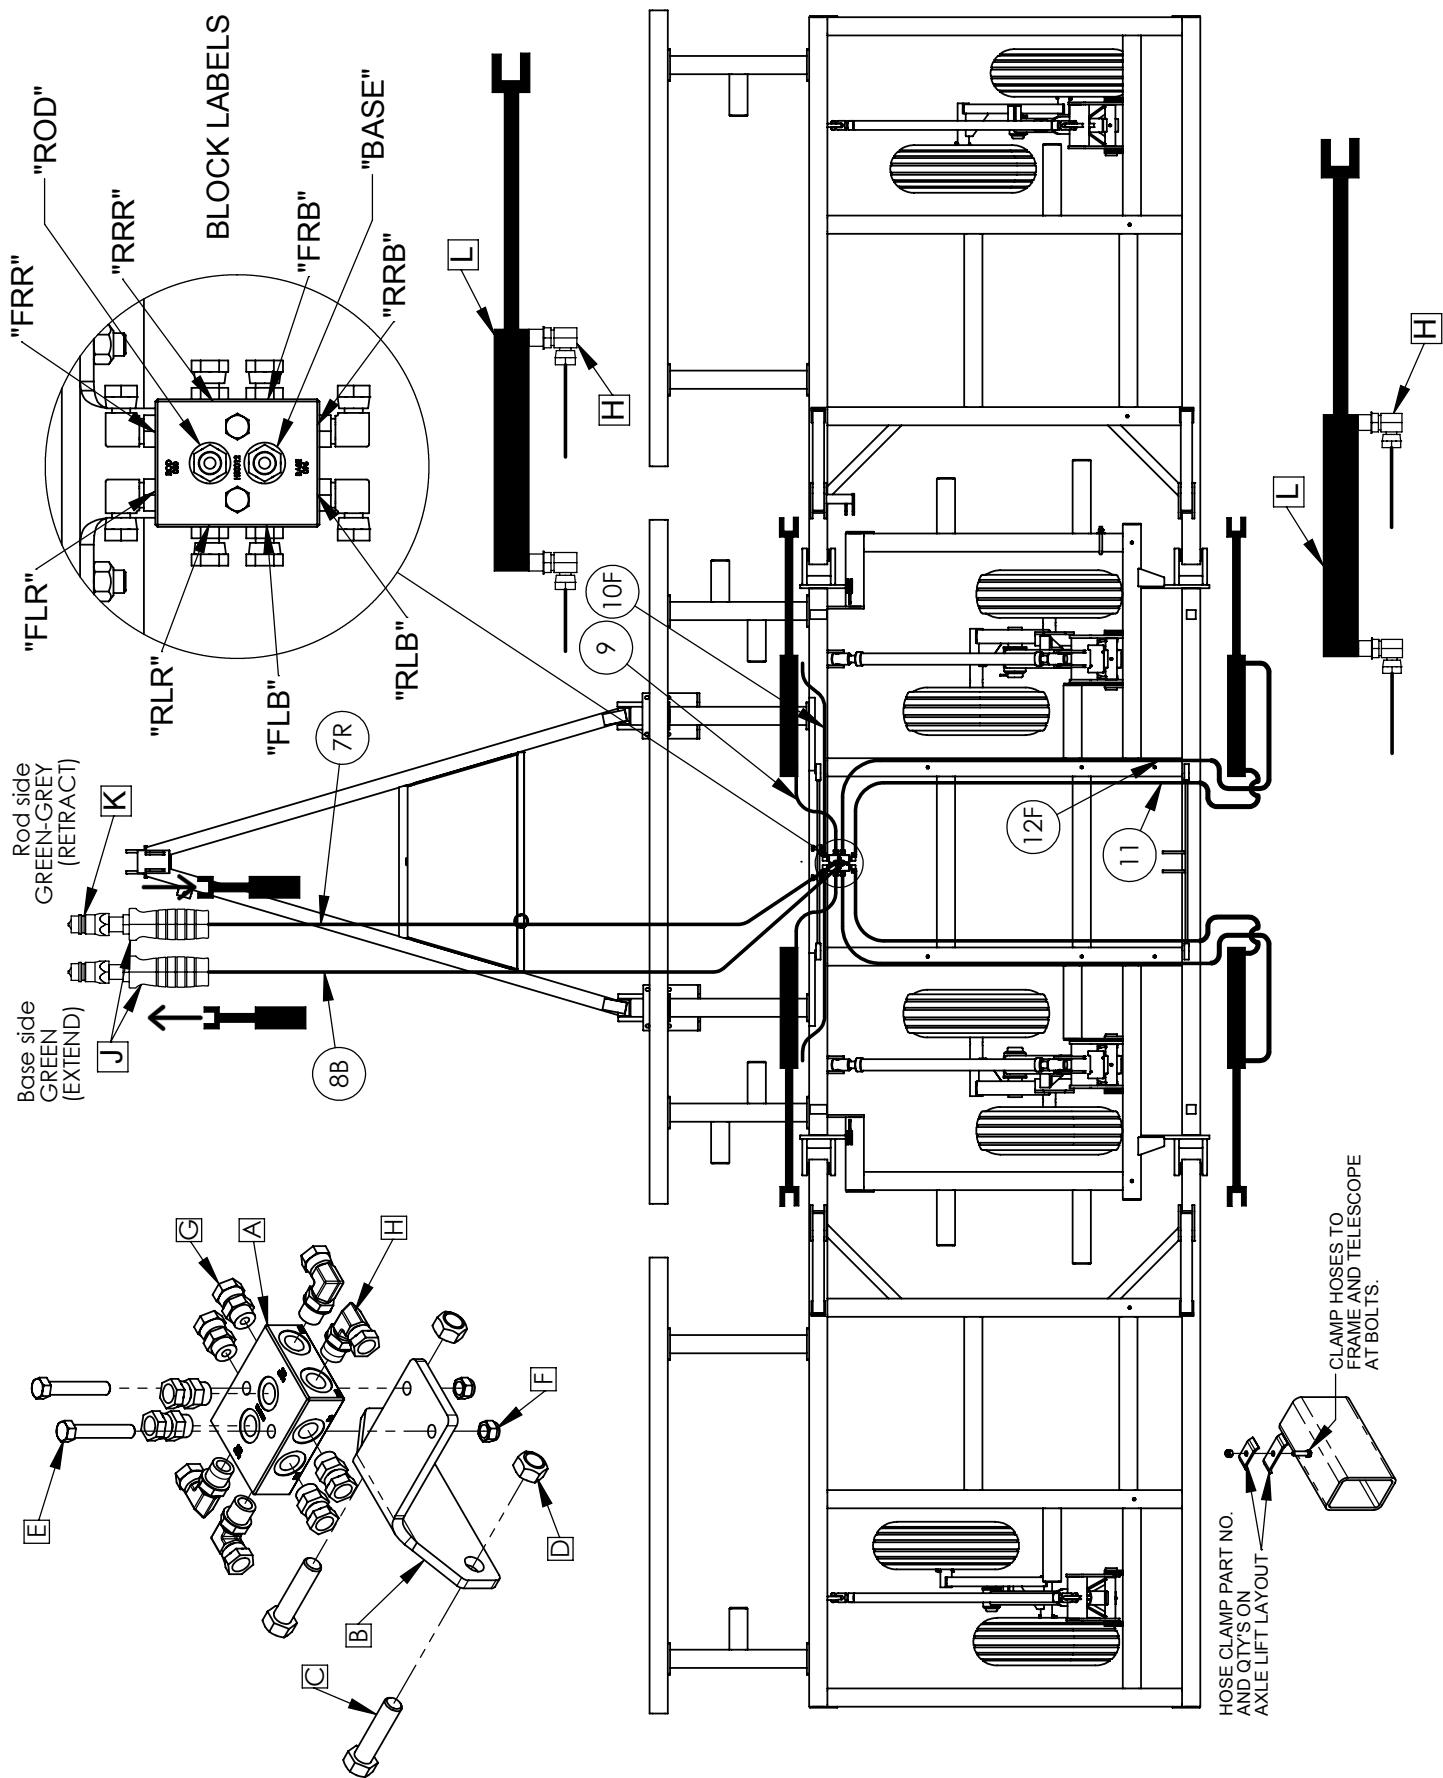

Route hoses  
behind tower

Leave a droop in hose at wing hinge.

### CHARGING FOLD CYLINDERS

**Do not connect the cylinder rod until system has been charged with oil.**

1. Prop up the cylinder with a block of wood (Fig 1). Check to see that the rod will extend completely without striking anything.
2. Connect tractor (note: check to see that all cylinders extend and retract in sync. If one goes backwards, check the plumbing.)
3. Extend cylinders completely, hold lever for 30 sec. as air exits cylinder.
4. Retract cylinder completely, hold lever for 30 sec. as air exits.
5. Repeat steps 3&4 three times.
6. Install cylinder pins. Be sure washers are installed correctly (see fold cylinder parts page).

**Air in the wing cylinder will cause wings to fall to the ground!!!**

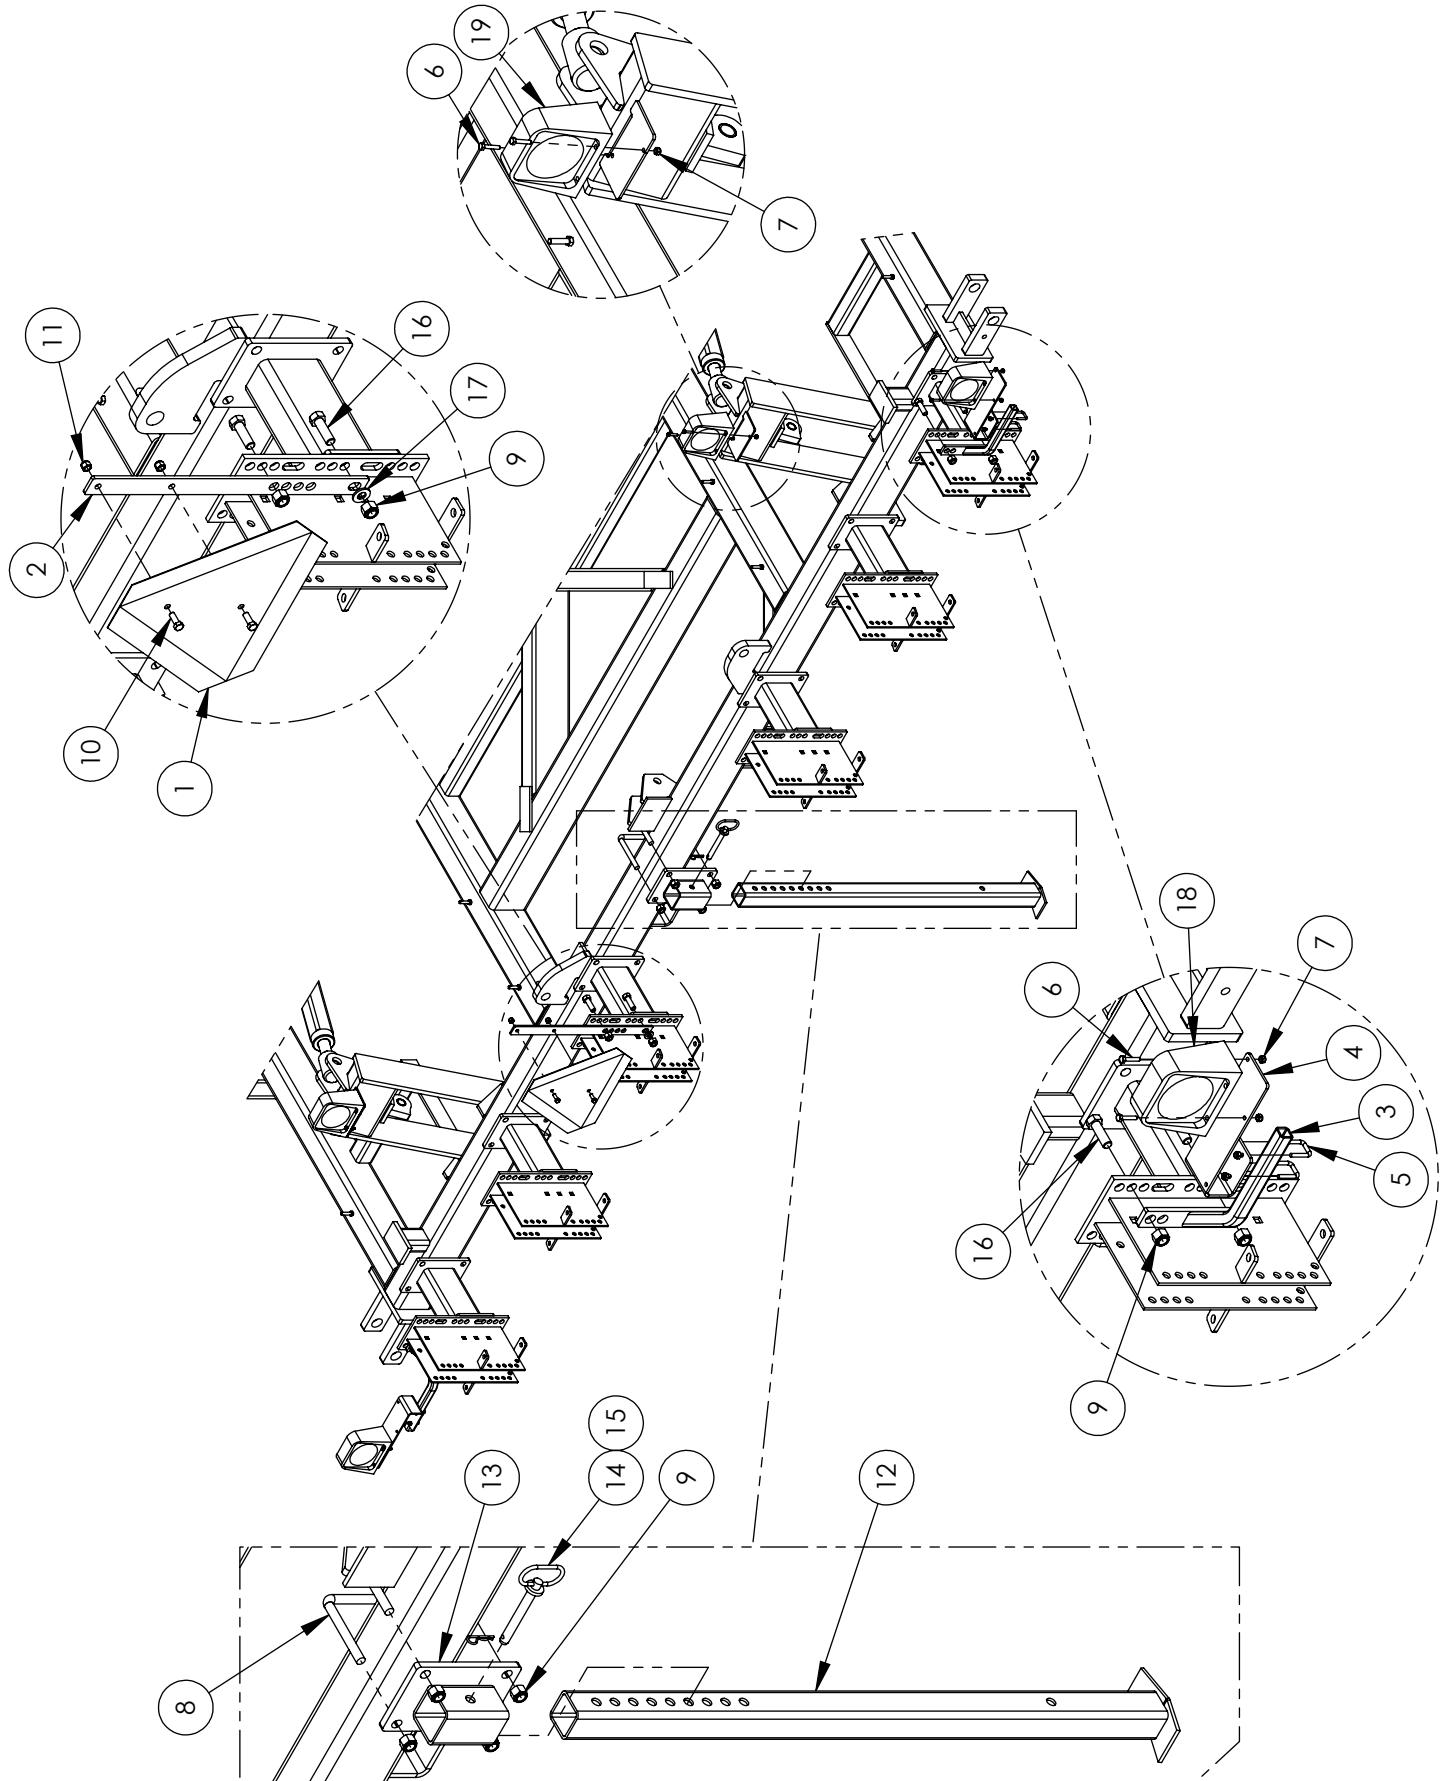

Whenever air could have entered the cylinders, repeat the process above to purge circuit.

**ALWAYS UNFOLD WINGS before working on hydraulics!!! Never work on a lift system with the wings folded**

Fig 1. When charging the circuit, prop up cylinder with block of wood. Be sure the rod can extend freely without striking anything.
